The best project I've completed was a highly customized WordPress project that had an extremely tight deadline. I worked very diligently and managed to finish the site a day early.

EXPERIENCE

Allshore Virtual Staffing August 2016 – Present

Principal Software Engineer

- Determine operational feasibility by evaluating analysis, problem definition, requirements, solution development, and proposed solutions or reviewing current system if it already exists.
- Present ideas for system development/improvement, including project timeline while working closely with clients.
- Produce detailed specifications, writing the program codes, and testing the product in controlled, real situations before going live.
- Document and demonstrate solutions by developing documentation, wireframes, flowcharts, layouts, diagrams, charts, training manuals for users, code comments, and clear code.
- Develop and deploy solutions by determining and designing system specifications, standards, and programming.
- Communicate with clients directly about project requirements and details on a daily basis.
- Improve operations by conducting systems analysis, recommending changes, and suggesting possible solutions.
- Learn about state-of-the-art development tools, programming techniques, and computing equipment. Continue to participate in educational opportunities.
- Develop software solutions by studying information needs, conferring with users, studying systems flow, data usage, and work processes, investigating problem areas, and following the software development lifecycle.
- Regularly commit code to repository servers and back-up work.

TOP SKILLS

Technologies: Drupal, WordPress, jQuery, CSS, JavaScript, Angular, SASS, CodeIgniter, Laravel, Git, HTML, Bootstrap, Ionic Framework, Vagrant, Vue.js, ReactJS

Frizcon Web Solutions January 2011 – July 2016

Senior Software Engineer

- Was responsible for managing a team of developers.
- Handled client communication regarding project requirements and progress.
- Built multiple full-scale websites for clients including a health and safety school, tutor scheduling service, and location reservation/rental.
- Was responsible for building a variety of plug-ins, modules, and themes including a custom portrait module, social media plug-in, and WordPress plug-in for database management.

Technologies: Drupal, WordPress, Laravel, CodeIgniter, jQuery, CSS, Bootstrap, SASS, Twilio, Web APIs

PROJECTS

My Artist

This site allows users to upload photos in order to hire an artist to create a pencil sketch. The system allows for the uploading of photos, assigning artists to users, as well as revisions and feedback. Artists have a separate management panel for their art, account, and customer history. This was a solo project, and I was responsible for developing the entire project for both the front-end and back-end. I created a custom Drupal module for the payment gateway, and used HTML, CSS, jQuery for the front-end.

Real Storage

Real storage is a Laravel based website that automates the process of renting nearby self-storage options in Canada. The site uses Sitelink API and allows users to reserve a location, make a payment, and order supplies. This was a solo project where I was responsible for the entire site, and created the front-end using CSS, Bootstrap, and jQuery.

<https://www.realstorage.ca>

Superior Learning

This website was created to connect students with available tutors in specific subjects. Tutors have an administration panel where they can manage their schedule and available programs. Students are able to login and request hourly sessions or subject packages with tutors, as well as make payments through the portal. This was a solo project and I was responsible for both the front and back-end of the website. For the back-end, I developed the site using Laravel, and the front-end was created using CSS, Bootstrap, jQuery, and Google Map API.
