EXPERIENCE

Allshore Virtual Staffing

May 2018 – Present

PHP Developer

- Determine operational feasibility by evaluating analysis, problem definition, requirements, solution development, and proposed solutions or reviewing current system if it already exists.
- Present ideas for system development/improvement, including project timeline while working closely with clients.
- Produce detailed specifications, writing the program codes, and testing the product in controlled, real situations before going live.
- Document and demonstrate solutions by developing documentation, wireframes, flowcharts, layouts, diagrams, charts, training manuals for users, code comments, and clear code.
- Develop and deploy solutions by determining and designing system specifications, standards, and programming.
- Communicate with clients directly about project requirements and details on a daily basis.
- Improve operations by conducting systems analysis, recommending changes, and suggesting possible solutions.
- Learn about state-of-the-art development tools, programming techniques, and computing equipment. Continue to participate in educational opportunities.
- Develop software solutions by studying information needs, conferring with users, studying systems flow, data usage, and work processes, investigating problem areas, and following the software development lifecycle.
- Regularly commit code to repository servers and back-up work.

Technologies: Zend Framework, CSS, MySQL, JavaScript, jQuery, HTML, WordPress, Bootstrap, PHP, Laravel, ReactJS, Redux, SASS, Git

Senior Web Application Developer

- Handled regular communication with client to discuss requirements and give status reports.
- Was responsible for training interns that worked with the company.
- Completed daily development tasks and bug fixes.
- Was responsible for regular server maintenance.
- Completed code reviews.

Technologies: Zend Framework, WordPress, JavaScript, jQuery, HTML, CSS, PHP

PROJECTS

WordPress Recruitment System

Created a job recruitment portal using WordPress CMS. Developed all aspects of the project and was responsible for gathering requirements, communicating with the client, full testing, and deployment. A custom theme was developed for this project that included custom post types and taxonomies. The system is able to track job postings, job categories, and individual candidates that apply for open positions. The front-end has dynamic interactivity that was created using jQuery and HTML5.

Multi-Restaurant Management System

Platform designed to allow multiple restaurants to use the same online ordering system. Each restaurant has its own sub-domain, but is able to access the full system. Was responsible for the entire project and creating all modules including online ordering, payment gateways, and receipt printing functionality. Designed and created using Zend Framework 1, HTML5, CSS3, Bootstrap, jQuery, and MySQL.

ATM Management System

A secure and robust system that tracks monthly transactions for ATMs. System can also generate monthly invoices based on location of the ATM, as well as graphs and charts to show performance. Was responsible for the entire project from requirement gathering, development, client communication, testing, to deployment and management of live system. Was created using Zend Framework 1, jQuery, and MySQL for the database.
