EXPERIENCE

Allshore Virtual Staffing

November 2019 - Present

Senior Software Engineer

- Determine operational feasibility by evaluating analysis, problem definition, requirements, solution development, and proposed solutions or reviewing current system if it already exists.
- Present ideas for system development/improvement, including project timeline while working closely with clients.
- Produce detailed specifications, writing the program codes, and testing the product in controlled, real situations before going live.
- Record and demonstrate solutions by developing documentation, wireframes, flowcharts, layouts, diagrams, charts, training manuals for users, code comments, and clear code.
- Develop and deploy solutions by determining and designing system specifications, standards, and programming.
- Communicate with clients directly about project requirements and details on a daily basis.
- Improve operations by conducting systems analysis, recommending changes, and suggesting possible solutions.
- Learn about state-of-the-art development tools, programming techniques, and computing equipment. Continue to participate in educational opportunities.
- Develop software solutions by studying information needs, conferring with users, studying systems flow, data usage, and work processes, investigating problem areas, and following the software development lifecycle.
- Regularly commit code to repository servers and back-up work.

Technologies: PHP, Drupal, WordPress, Laravel, MySQL, JavaScript, jQuery, HTML, CSS, Bootstrap, ReactJS

Senior Web Developer

- Managed back-end services and interchange of data between server and users.
- Developed all server-side logic, definition, and maintenance of the central database.
- Integrated front-end elements into the application.
- Integrated user-facing elements developed by front-end developers.
- Built efficient, testable, and reusable PHP modules.
- Solved complex performance problems and architectural challenges.
- Provided web and off-page optimization.

Technologies: Drupal, MySQL, ReactJS, Laravel, HTML, CSS, jQuery, JavaScript

D4Interactive

February 2014 - December 2015

Web Developer

- Responsible for writing server-side web application logic.
- Developed back-end components and connected the application with third-party web services.
- Supported front-end developers by integrating their work into the application.
- Built efficient, testable, and reusable PHP modules.
- Solved complex performance problems and architectural challenges.
- Provided web and off-page optimization.

Technologies: Python, Django, MySQL, HTML, jQuery, JavaScript

PROJECTS

Tutor

Tutor is an educational platform that brings together teachers and students. Was responsible for designing and developing system structure. Created back-end on Laravel and built Restful APIs. Transformed HTML to React components and linked them with the APIs. Also used Redux, MySQL, and Bootstrap.

Kouponed

Kouponed is an online platform for coupons where users have access to deals and discount vouchers. Was responsible for designing and creating modular functionality in Drupal to pull coupons from affiliate network through API. Saved data into the database and provided an interface to the user/admin for coupon and sales tracking. Used Bootstrap, CSS, JavaScript, and jQuery for front-end development.

URL: <https://www.kouponed.com/>

LUMS

LUMS is a multi-domain site for a large university. All sub-sites were being controlled by the main parent domain. Developed a complete portal that can scale sub-sites up to 50 sub-domains. Developed Drupal architecture

that would not decrease overall performance even if there is an increase in sub-sites or site traffic. Built several modules that were fetching data from the legacy system using SOAP APIs and merging it into the main website. Bootstrap, CSS, JavaScript, and jQuery were used for front-end development.
