“

The most amazing project I have completed was a large weather prediction software. I developed an interactive display for data and coded numerical models for large-scale patterns.

EXPERIENCE

Allshore Virtual Staffing

August 2017 - Present

Senior Software Engineer

- Determine operational feasibility by evaluating analysis, problem definition, requirements, solution development, and proposed solutions or reviewing current system if it already exists.
- Present ideas for system development/improvement, including project timeline while working closely with clients.
- Produce detailed specifications, writing the program codes, and testing the product in controlled, real situations before going live.
- Document and demonstrate solutions by developing documentation, wireframes, flowcharts, layouts, diagrams, charts, training manuals for users, code comments, and clear code.
- Develop and deploy solutions by determining and designing system specifications, standards, and programming.
- Communicate with clients directly about project requirements and details on a daily basis.
- Improve operations by conducting systems analysis, recommending changes, and suggesting possible solutions.
- Learn about state-of-the-art development tools, programming techniques, and computing equipment. Continue to participate in educational opportunities.
- Develop software solutions by studying information needs, conferring with users, studying systems flow, data usage, and work processes, investigating problem areas, and following the software development lifecycle.
- Regularly commit code to repository servers and back-up work.

Technologies: CodeIgniter, PHP, HTML, CSS, JavaScript, jQuery, MySQL, Twig Template Engine, Drupal, Python, SASS, Git

jQuery: 6 years

SASS: Less than 1 year

Pakistan Meteorological Department

November 2012 - July 2017

Programmer

- Worked in Research & Development Department on numerical weather prediction products and developed interactive web application to display weather data using human-computer interaction concepts.
- Application of numerical models for the simulation of the large-scale patterns and dynamics of climate at a regional scale using a high performance computing environment. Improved the portability, scalability, data handling, and overall performance of the system and provided continuing support for the archival, dissemination, and use of the resulting data.
- Developed communication and web display system for remotely deployed automatic weather station. Communication module is based on satellite or GSM communication.
- Developed back-end office and web services for application of weather information.
- Handled bug fixes, site code health, and added new features to company website over multiple sub domains and various type of databases.
- Backed up and committed all the code to server.

Technologies: PHP, JavaScript, AJAX, Drupal, Bootstrap, RESTful API, MySQL, MS SQL Server, Oracle, HTML, Git, Twig Template Engine

Vizteck Solutions

June 2010 - November 2012

Senior Software Engineer/Team Lead

- Worked as Team Lead on several different projects. Was responsible for scope and planning development.
- Implementation, modification, and maintenance of web applications and user interfaces.
- Determined operational feasibility by evaluating analysis, problem definition, requirements, solution development, and proposed solutions.
- Developed multiple projects using Drupal including e-commerce, fitness, and customer relations applications.
- Developed custom modules and themes in Drupal to use in projects.
- Developed and maintained company's internal employee management system.
- Wrote and maintained service code using XML format to send data back and forth.
- Developed various API for public facing applications.
- Maintained custom JavaScript and jQuery code.
- Full case testing and deployment of new developments.
- Worked on tools to provide bug tracking, issue tracking, and project management functions.

Technologies: Drupal, PHP, JavaScript, jQuery, AJAX, Bootstrap, Symfony, MySQL, RESTful API, HTML, XML, MVC Core, Apache

PROJECTS

Fit-Awesome

Android application with browser capabilities built using Drupal. Fit-Awesome is a fitness tracker program that allows users to track information and interact with their personal trainers. Users also receive

text message reminders about exercise activities and meal plans. Trainers can monitor client fitness activity and progress through the app, transfer clients if needed, and add new clients.

Register My Info

Register My Info allows you to save your important information in one place and share it with different medical entities. The program cuts down on the time it takes to share medical information with different doctors, surgeons, and hospitals.

Register My Info can be accessed from a portal or through smartphone applications. Users can add their driver license number, medical history, employment details, health insurance information, and credit card information to avoid filling out the same information at multiple locations.

FWT Logistics

<http://www.fwt-logi.com/>

FWT Logistics is a Japanese shipping and transportation company. This system covers all phases of the shipping and transportation process and includes invoice generation. My responsibilities were to work on new modules for the front and back end from scratch and update them according to client requirements.
